POSITION, NOV 2022 — MAY 2024 (1.5 YEARS)
Fullstack Developer @ Freelance

I've built various projects as an individual contractor/contributor for a while. After leaving EPAM, I thought that I need to reconsider my career, take a break and then find a company where I'll stick for a longer time. Meanwhile, I've worked on projects at companies such as Frame, datarockets and others. I've built large-scale products, sometimes as a standalone developer (except infra). I've used TypeScript, React, Python, FastAPI, Postgres and a lot more to do that.

POSITION, MAY — NOV 2022 (7 MONTHS)
Front-end Developer @ EPAM Systems

EPAM is a large American software company and a founding member of the MACH Alliance.

At EPAM, I've worked on the UI kit for the internal projects. Here, the codebase was mostly fresh, we've used TypeScript and Jotai. It was nice, but after the active phase of the project ended, I've decided to leave, take a break and reconsider my job preferences. After changing three full-time positions in under 2 years, I thought it would be nice to find something really clicking with me.

POSITION, NOV 2021 — APR 2022 (6 MONTHS)
React Native Developer @ MCC Soft

MCC Soft is a software company based in Germany, mostly aimed at medical software, but also working on various other projects.

In November 2021, I joined MCC Soft as a React Native developer. It was a whole new experience with React Native, and I have finally worked with TypeScript in a "real" project. Here I was working in a small team developing a mobile app that helps using a certain medical device. I've worked on numerous features, such as dark theme support and a rework of several app screens

POSITION, MAR — NOV 2021 (7 MONTHS)
Front-end Developer @ Intetics

After 3 years of freelancing, I was ready to settle and try a full-time job. In Intetics I was building the UI of an online educational service. It was full of legacy code and the codebase was large, so it was an interesting experience

POSITION, SEP 2020 — MAR 2021 (7 MONTHS)
Fullstack Developer @ Freelance

At this point, it was time to expand my skillset to front-end development, so I have started with React and JavaScript

POSITION, APR 2018 — SEP 2020 (2.4 YEARS)
Back-end Developer @ Freelance

At first, I have started working on back-end freelance projects. It was a great start for my career, I have built several projects using Flask and later also aiohttp
